She obtained her Ph.D. in <u>political\_Political\_science\_Science fromin\_1990\_at\_\_</u>Indiana University, Bloomington, <u>Indianain 1990</u>. <u>-Her-She</u> articles <u>ii</u>ncludes "<u>The Causes of</u> <u>Gender Discrimination in Korean Labor Market"</u>Do Woman Lead Differently? Building the Bridges" (2001). E-mail: <u>-choks@ewha.ac.kr</u>.

# Abstract (너무 깁니다. 단어로 줄여 주시기 바랍니다.)

The 2002 presidential election outcomes <u>deflected\_controverted\_many political\_observers'</u> forecasts in many ways.—\_Three <u>distinguishing\_characteristics can be found in the 2002</u> election. \_First of all<u>The first occurs along\_\_\_\_\_\_</u> it is on the <u>a\_\_\_\_\_\_</u> continuum of past election patterns. \_We find the<u>There is an apparent</u> sustained decline of the voting turnout and the persistence of regional cleavage since 1987. \_\_Secondly, age and ideology have <u>always</u> been important variables in vote choice, but that pattern gets <u>becomes\_intensified\_in the</u> <u>recent\_election</u>. \_\_And <u>Additionally\_\_\_finally\_\_some\_\_\_new\_\_patterns\_\_also\_\_emerged</u>. Voluntary civil participation during the campaign, especially <u>as expressed through Mr</u>. Roh's fan\_club, "Roh sa mo",<u>Nosamo\_\_\_exhibited\_demonstrated\_the\_importance\_of\_quite</u> earnest\_Internet based\_activities,<u>\_\_as\_\_\_\_t</u>The\_Internet\_made\_a great\_difference\_in\_\_\_this election. \_\_Part of the reason the generation gap became <u>such a salient deciding factor so</u> salient is that most Internet users are of the young<u>er</u> generation.

After examining both the-continuity and changes of <u>in</u> the 2002 presidential election in comparison with past elections, I conclude <u>assert</u> that <u>the</u> 2002 election manifested political change by bringing about secular realignment.—<u>Accumulation The ilnevitable result of</u> <u>accumulated of societalal</u> change <u>geared intoplayed a major role in creating</u> partisan

realignment, which cross-cuttingcut across previous regional cleavages in this election. This rRealignment happened-was possible due to because of the following three factors: macro\_-political conditions, and new issues such as political reform and the sunshine policy(be more clear), and candidate Roh, who bridges-was able to bridge the gulf between the two.—\_Macro political conditions included de-aligned voters and the former President Kim Dae Jung's controversialy in the policy towards North Korea.—\_Mr. Roh was able to carry through (or bbroughtbring about enefit from?) these political changes since he has beenwas viewed as an anti-regionalist, outsider, and a progressive.

Keywords: <u>Regionalismregionalism</u>, <u>Party-party</u>realignment, <u>Dealignmentde-alignment</u>, <u>Sunshine sunshine</u> policy, <u>Generational generational gap</u>

<del>제가 고친 것은 그린색입니다.</del>

#### 1. Introduction

The 2002 presidential election outcomes deflected many observers' forecasts in many wayswaysbroke with many obersversobservers' expectations; in many ways.—\_They were puzzled with the contradictory election outcomes, as theys.\_Although the results brought Mr. Roh Moo-hyun a surprising victory, the major patterns of the previous elections have persisted were still evident. \_\_The election outcome appeared veryquite unique and different from thatthat of previous elections on the one hand. \_We have\_witnessed massive voluntary activism and internet-based campaign for the first time in history. \_On the other hand, patterns discovered in the previous elections, such as the prevalence of prevailing regional voting and the decline in voterof turnout were still evident. Throughout the year, the most notable features of the election can be characterized as in terms of the instability of candidate support, as shown in figure Figure 1. According to public opinion polls, candidates' popularity fluctuated throughout the year, which made rendering the which made the prediction of election outcome unpredictableunreliable.

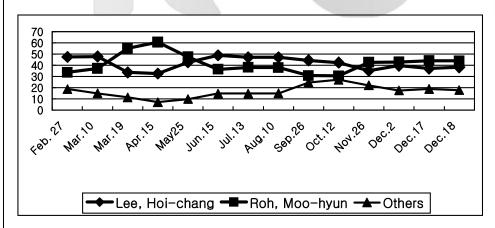

Figure 1. Candidate Support in 2002 (%)

In summary, <u>Tthree distinguishing characteristics can be found in the 2002 election. The</u> <u>first occurs along a continuum of past election patterns. three characteristics can be found</u> in the 2002 election. First of all, it is on the continuum of past election patterns. Secondly, however, that<u>In the recent election, that pattern getsbecomes</u>\_\_\_\_\_ intensified\_<u>a</u>. And finally some\_\_\_\_\_\_ new\_\_\_patterns\_\_also\_\_emerged\_emerges\_\_\_\_\_ in \_\_\_\_\_ new\_\_\_patterns. Elaboration\_\_\_\_\_\_ on \_\_\_\_\_ these characteristics will be suggested below.

First, what patterns are continued<u>from previosprevious elections</u>? \_One is the sustained decline of the voting turnout since 1987. \_This <u>The most recent</u> election scored a quite low voting rate of 70.8%<u>percent</u>. \_The other<u>Another</u> pattern is <u>continued in</u> recent elections is expressed in that the persistent\_regional cleavage\_in\_voting <u>patterns.patterns.S</u> that persisted as in the past elections. \_For example, Mr. Lee Hoi-chang received about 70 % <u>percent</u> of the votes from Yeoungnam while Mr. Roh received 91-95<u>percent</u>% from Honam. \_\_

Second, age and ideological leaningsy became prominent factors in voting choice. The age factor has been significant in almost every election since the advent of democratization in since 1987. \_\_The 2000 election was an exceptional case because it had a number of young candidates in their 30s nominated not only by the ruling party but also by the opposition partyby the opposition one as well. \_\_As a result, the age effect was nullified and did not draw as much attention as the 2002 election did. \_\_The 2002 election results made moved the word "generation gap" so popularto a prominent place in the minds of the populace. \_\_Ideology, the other characteristic\_and key to understanding changes since previous elections, became significant and has interacted with the age factor ever since 1997 presidential election. (You have to explain or give and example here \_\_I assume you're talking about the relatively more conservative ideological leanings of the older generation \_ anti Communist, generally supportive of the US \_\_versus the ideas of the younger generation. Make this explicit to the reader.)-

<u>ThirdFinally</u>, the feature of the 2002 election which <u>that</u> differed <u>most</u> from the previous ones is the fact that Jung <u>Chung</u> Mong-ju<u>oo</u>n and Roh Moo-hyun agreed upon a unified candidacy following the result of the national poll. <u>The appearance of the a</u>

third candidate can be interpreted as an indication of party de-alignment. \_Candidacy unification artificially put a stop to increased party de-alignment and promoted realignment.

The new trend in the 2002 election may have been the <u>that of voluntary civil</u> participation during the campaign. \_\_Especially <u>in the case of Mr. Tthen-candidate</u> Roh's fan club<u>cum political advocacy group\_</u>, "Roh-sa-mo<u>Nosamo</u>,"\_, exhibited quite earnest Internet based activities. The Internet made a great difference in this election. \_\_It overwhelmed the influence of newspapers and appeared as an <u>powerful</u>\_emerging powerful mediamedium. \_\_Part of the reason the generation gap became so salient <u>a</u> factor in this election has to do with the fact that is that most Internet users are of the young generation. \_\_

The purpose of this paper is to present and discuss both the continuity and changes of the 2002 presidential election in comparison with past elections. If <del>we could</del> findit is possible to identify the continued patternspatterns of continuity from previous elections, then the origin of that pattern should be identified<u>then</u>it becomes possible to <u>indentifyidentify</u> their origin.— If we foundIn a similar way, if it is possible to identify patterns of any changes from the past, then we also have to see what the impetus of that change isthen it will become possible to identify the impetus driving itthem.—In this paper, I will attempt to explainAlso, while exploring these patterns of continuity and changes of theas expressed in the 2002 presidential election outcomes, I will place them within the into the same a larger theoretical framework.

<u>In order to fully understand the meaning of 2002 presidential election, t</u>The outcomes of each election since the 1987 presidential election and analyses of their meanings will be <u>summarized presented</u> in the next section.—\_In the third section, the <u>patterns of continuity and changes</u> found in the outcome of the 2002 presidential election will be examined.—\_\_On the surface, the 2002 election <u>largely\_followed previously</u> <u>established patterns</u>, but <u>had\_these also took place alongside considerable changes from the past</u>, and thus <u>brought-yielded</u> unexpected results.—\_In the fourth section, <u>we-I</u> will discuss the simultaneous <u>factors of continuity</u> and change, and present <u>our owna different</u>

theoretical model to understand the seemingly contradictory results. <u>Through this model</u>, we can, while explain offering an explantion explanation for the background factors the background reasons for<u>that led to</u> the election of <u>president President</u> Roh.—\_Finally, by way of in the conclusionconcluding my argument, we I will offer some speculations about the summarize the results of this paper and speculate on the future path of the Korean party politics and <u>possibilities for</u> political reform.

#### The History of Presidential Elections since Democratization

As a result of the democratization movement in June 1987, Ppresident Chun Doo-hwan accepted the constitutional reform for mandating direct presidential elections. \_\_\_\_\_The Direct direct elections was were revived for the first time since being nullified by President Park Chung-H-hee.-\_In 1987, the government partyDemocratic Justice Party (DJP) nominated Mr.-Roh Tae-woo for president.- He had-carried out a coup d'état of-in December 1979 and was designated as the successor toof Chun. On the opposite side, Kim Young-sam (YS) and Kim Dae-jung (DJ) led the democratic camp.— Voters demanded the unification of the presidential candidates of the democratic camp, but both leaders ignored these demandsit and ran separately ran-for the election because they were each was assured of the certainty of their own victory, their. Their calculations having been was based on regional cleavage.\_\_\_<u>Mr.</u>Roh Tae Woo came <u>comescame</u> from\_<u>the TD</u>aegu\_(7 /Kyungbuk Gyeongsangbuk-do province), area while YS came haileds from the PusanBusan (, Kyungnam-Gyeongsangnam-do province) area., so bothBoth of them were from Yeoungnam\_region, in the south-eastern Korea.— Therefore, DJ, who comescame from Honam region in the southwest, expected to have an advantage over the other two candidates.

Regionalism has <u>been a feature of prevailed in Korean Spresidential elections since</u> <u>the very early stages of democracy in Korea</u>. Various theories explain this (<del>Choi-Choie</del> 1993:-; Cho 1998; Cho<sub>2</sub> 2000a).--\_The most common argument is that <u>the the</u>-former presidents Park Chung-<u>H-h</u>ee and Chun Doo<u>-h</u>-<u>H</u>wan, who both hailed from <u>TaeguDaegu/\_ Kyungbuk Gveongbuk both</u>, instituted a severe discriminatory policy in the appointment of <u>high\_levelhigh-level</u> public officials and <u>practiced\_pork</u> barrel <u>allocationspolitics</u>.—\_Due to the traditional antagonism between <u>the YongnamYeongnam</u> and Honam areas, this policy incited a sense of alienation <u>of\_among the</u> Honam people. There was much resentment for this discrimination and DJ was able to use <u>this\_it\_to</u> consolidate vast support in Honam.

Roh <u>Tae-woo</u> was <u>eventually</u> victorious.—\_\_However, the election process revealed a growing push for freedom and democracy.—<u>In addition, But-it is more</u> <u>importantly,noteworthy that</u> for the first time in history, the <u>government partyDJP</u>, led by <u>the former P</u>president Roh<sub>z</sub> became the minority in the National Assembly as a result of the 1988 general election<u>s</u>s.—<u>It was partly becauseThis was partially due to</u> election law confin<u>inged</u> the privilege of the <u>government ruling</u> party, but <u>mostly-the major reason for</u> <u>this unprecedented shift lay in the fact that the because</u> four regional parties were born after the 1988 general elections.—\_The <u>government partyDJP</u>, which was now just one out of four regional parties, naturally held less than the majority of the seats in the National Assembly.

In the past, region had played a critical role in presidential elections. But in the general elections<sub>2</sub> urbanization had <u>been\_becomre\_</u>the most important factor.—\_The opposition party won the seats in the urban areas<sub>2</sub> while the ruling party <u>found support</u> <u>inwas supported in</u> the rural <u>areasones</u>.—\_Democratization <u>diluted lessened</u> the division of democracy and non-democracy between the urban and the rural.—\_As a result, regionalism affected the general elections as a decisive factor for the first time.

In the 1992 presidential election, two leaders of the democratic camp, YS and DJ, clashed again.—<u>ButHowever</u>, <u>in this timeelection</u>. Chung JooJu-young, the CEO of the Hyundai Corporation joined the race<u>in this election</u>. (are you saying this had a causal effect on the other camp? You mean that he was such a large potential threat that he forded other parties to boost and and consilodate their support? If you are, you should state something along those lines.) \_\_At-By the end of the election, Kim Young-sam Kim (YS), <u>a candidate</u> from the ruling party-, was elected\_declared the victor.—<u>As Because of the fact that president</u> Roh Tae<u>w</u> Woo, as president, went throughencountered so

<u>muchsignificant resistance difficulty</u> in the National Assembly, as as he had been surrounded-flanked by three opposition parties, he <u>Therefore</u>, <u>Roh</u> merged the party with YS and Kim Jong-pil (<u>the successor of President Park and</u> the representative of <u>the</u> conservative party <u>which</u> that had its political base in the <u>ChoongChung-chung cheong</u> province, and also<u>region</u> the successor of <u>President Park</u>) and made a giant ruling party, <u>the Democratic Liberal Party (DLP)</u>.—\_YS was nominated in 1992 as a presidential candidate of the merged ruling party.

President Kim (YS) built the first civilian government since the military dictatorship ended, and discharged the-private factions within the military.—\_The "real-name account system" was one of the most important contributions of President Kim because it halted the flow of black money.—\_However, due to his son's involvement in a corruption scandal, the <u>perception of the</u> morality of Kim<u>'s</u> government declined, and the reformation\_\_policy was stranded.—\_At the end of the-<u>his</u> term, the <u>Asian</u> financial crisis swept <u>had\_afflicted\_</u>the nation, and the government finally went for a bailout by the IMF had to subject itself to an IMF bailout.

In the 1997 presidential election, Mr.–Lee Hoi-chang, a former justice of the Supreme Court who held various important posts in the YS government, became the presidential candidate of the government-ruling party.—\_\_Again, DJ ran as a candidate of the opposition party.—\_It was the fourth time that he had run for president, having made attempts in the years 1971, 1987 and 1992.—\_As Rhee In-je walked out of the ruling party's nomination, due to competition with Mr.–Lee Hoi-chang, and became the-a third-party candidate, the 1997 election became a battlefield of trilateral competition of two major candidates and one minor\_one.—\_Thanks to the failure of the economic policy of the government-ruling party, DJ at last-was at last elected as a president.

President Kim (DJ)Dae-jung skillfully overcame the economic crisis<u>and</u>, widened opened\_the\_channels\_of talkcommunication with the North, and\_thereby\_stabilizinged South Korea's the relationship with the North Korea through his "sunshine policy."—\_The building of <u>an</u> Internet infrastructure is another achievement of his government, which made the nation one of the most powerful IT countries in the world.—\_However, the reformation\_\_of education policy and the health care insurance system did not bear fruit due to the resistance of stakeholders.—<u>The political fallout of h</u>His two sons' corruption <u>scandal</u> at the end of his term also inhibited his reform<del>ist</del> policy.—\_Finally, right after he left office, an Independent Counsel was appointed to investigate the <u>sending of money to</u> the North inappropriatelysuspicious transfer of funds to the North.

Many consider the 2002 election <u>to be</u> one of the most unpredictable elections in Korean history.—\_Roh<u>Moo-hyun</u>'s <u>winning victory</u> was a surprising <u>event</u> not only in the primary elections for candidacy<sub>z</sub> but also in the main presidential election.—\_For the whole of<u>Throughout the</u> President Kim's term, the Millennium Democratic Party (MDP) did not seem to have much chance of winning again in <u>the a next subsequent</u> election. <u>Mr.</u> Lee Hoi-chang, the counterpart in the last election, <u>kept had maintained</u> his power in the opposition party for five years.—\_Voters in <u>YoungnamYeongnam region</u>, who <u>had</u> lost their political privilege for the first time<sub>z</sub> continuously supported <u>Mr. LeeLee Hoi-chang</u> and the Grand National Party.\_\_<u>Mr.</u> Lee had been called the "half president" for those five years.

However, the sentiment of crisis <u>enabled\_made</u> the reform of the <u>government</u> <u>partyMDP possible</u> and led the party to hold the first open primary (electorates composed of half party representatives and half voters).—\_The reason Roh <u>Muhyun</u> (who did not have any supporting ground within the party) won the primary was that he had several special qualifications for the election.—\_<u>We will discussThese will be discussed</u> them-in the fourth section<u>of this paper</u>.

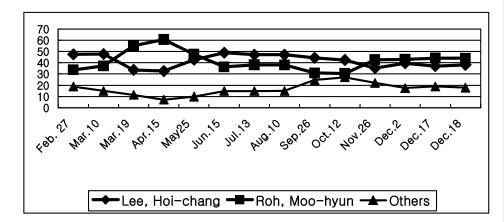

Roh's <u>winvictoryning</u> illustrated how a volunteer-oriented campaign <u>could have</u> <u>more competitive powerwas able to gain-position itself more competitively (?)</u> than the traditional<sub>z</sub> organization-oriented one<u>s</u>.—<u>Specifically More specifically, through the</u> <u>Internet, these-alternative campaign strategies were able to be fully played at and executed</u> the Internet gave full play (?)\_to the whole campaign process (Kim Hyeong-jun; 2003). Internet-based activities like Roh's fan club played <u>an very</u>-important role.—<u>as</u> Internet media also <u>countered provided a countervoicecounter voice to</u> the conservative media, and disseminated information favorable to Roh.

<u>Having been\_vVictorious\_t</u>Thanks to this volunteer movement, Roh's government called itself <u>a</u> "participatory government." To encourage and institutionalize civilian participation in government policy, the government employed a senior advis<u>o</u>er of civilian participation and received recommendations for minister<u>ial</u> candidates through the Internet.—\_

Many observers argue that Roh's victory <u>means-marks a huge political</u> change. However, the changethis shift away from the norm did not meandid not mark an abrupt discontinuity from the previous election outcomes and voting behavior.—\_\_\_They wereThese behaviors exist on along a the \_\_continuum of the previous election experience. In order to properly exploreThen, what isHowever, before exploring this point, it is first necessary to define these pattern of continuity and what is change in the 2002 election.? We will discuss them inThis will be the topic of the next section.

# **Change and Continuity**

Throughout the year, the most notable features of the election can be characterized in terms of the instability of candidate support, as shown in Figure 1. –According to public opinion polls, the presidential candidates' popularity fluctuated so that it made the prediction of election outcome unreliable.

### Figure 1. Candidate Support in 2002 (%)

Then, why support for the candidate has been unstable and fluctuating? Can we make sense of this phenomenon in relation to other distinguishing characteristics found in 2002 election?

Three things from the 2002 election outcomes are worthy of closer attention. The first occurs along a continuum of past election patterns. Second, in the recent election, that pattern becomes intensified and finally emerges in new patterns. Elaboration on these three characteristics will be suggested below.

First, what patterns are continued from previous elections? One is the sustained decline of votinger turnout since 1987. The most recent election scored a quite a low voting rate of 70.8 percent

The outcome <u>number of voters of in the 2002 election did not deviate from the past</u> elections. <u>\_FirstlyFirst</u>. <u>A</u>, although there was great mobilization by the Internet and phone campaigns, the voting rate <u>has been continuously</u> declining, ned continuously as shown in *<*Figure 2>.—\_Especially in the 20s and 30s age range, the voting rate was only around of 20s and 30s fell by 47.5% and, 68.9%, respectively. The voting rate of in the 20's age group was 5.3% point below to that of the last presidential election.—\_<u>The Overall</u>, the reduction <u>fall</u> in <u>voting voter</u> turnout was even sharper than the previous elections.

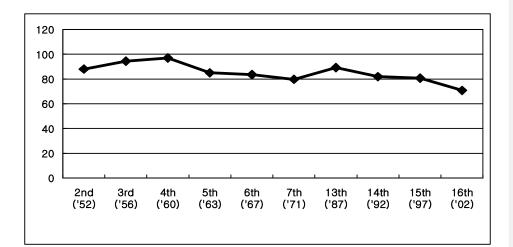

Figure 2. –Voting Rate (%)

<u>Voting patterns continued to be marked by The</u>-regional divisions as well. continued, too.\_\_\_<u>Mr.</u> Lee achieved <u>received</u> nearly 70% of <u>support\_the votes</u> from <u>YoungnamYeongnam region</u>, while <u>Mr</u>. Roh got 91-95% <u>voter support in voters from from</u> Honam<u>region</u>.—<u>The rR</u>egional differences between the west<u>ern</u> and east<u>ern sections of</u> <u>Korea had</u> persisted.—<u>As shown in </u>Table 1>, analyses of survey data also demonstrate that regional affiliation (measured by hometown) <u>were-was</u> the largest determinant of the election <u>outcomesresults</u>.

As seen in <Figures 3>, <u>and 4</u>, Roh had <u>a great deal of support from the young</u> and highly educated voters.—<u>The addition, the younger generation Uu</u>sually the younger generation-possesses\_has a higher education level than the older<u>one</u>.—<u>And tThus</u>, as in multi-variate analysis of <Table 1>, the education effect disappears, while age remains a salient variable.

Second, Age has usually been an important variable in voting patterns the age factor has been significant in almost every election since the advent of democratization sincein 1987. The 2000 election was an exceptional case because it had a number of young candidates in their 30s nominated not only by the ruling party but by the opposition one as well. As a result, the age effect was nullified. — Table 1> shows that age had been playing an important role since 1992, except in the case of the for 2000 National Assembly elections. In the 2000 elections, however, two parties competitively nominated candidates in their 30s who had been the leaders of student activists in the democratic movement. Therefore, age was not significant only in the 2002 election outcomes. The 2002 election results moved the word "generation gap" to a prominent place in the minds of the populace.

The reasons why age becomes a more salient variable in 2002this election are two: one has to do withis- the nature of the prevailing issues and the other is the Internet. –In 2002 presidential election, the salient issues were policy toward the North Korea and Anti-Americanism. Young voters who haved not gone through the experienced Korean War arewere the strong supporters of DJ's "sunshine policy." Since they also lived under relative affluence and prosperity, they demanded equal partnership in the relationship with the U.S.

is because of the Internet. \_<Table 2> shows the Internet users by age.

Controlling <u>for</u> other factors, age alone stands out <u>in-as the key variable</u> affecting the way voters collected major information on candidates.—\_But again, the effect of the Internet is, <u>in some sense</u>, exaggerated <u>in some sense</u>.—\_According to the polls, most electorates (81.5%) <u>got\_received</u> information <u>about the election</u> through <u>TVtelevision</u>.—\_Not many people <u>got\_gathered</u> information about the candidate through the Internet (2.9%).—\_The advent of age as a new variable <u>in reality</u> is, <u>in reality</u>, led by party realignment and we will deal with this issue in the next section.

# (Source: Kim H.-<u>yeong-jun (</u>2003).

Ideology, the other characteristic and key to understanding changes since previous elections, became significant and has interacted with the age factor ever since 1997 presidential election. Thus, older voters were more conservative, whereas younger voters were more liberal. –The nature of the-ideology in 2002 election will be discussed later. (You have to explain or give and example here – I assume you're talking about the relatively more conservative ideological leanings of the older generation – anti-Communist, generally supportive of the US – versus the ideas of the younger generation. Make this explicit to the reader.)

The emergence of age and ideology as important determining factors signifies the meaning of the 2002 presidential election, since as age and ideology arewere the driving forces of partisan realignment.

Party realignment requires a new cleavage (Lipset and Rokkan 1967). While regionalism enused-was the cause of sucha cleavage in the past, ideology started emerging as the new cleavage since the 1997 presidential election (Cho 2000b).—\_\_However, ideological differences in Korea\_do not come\_fromrevolve around issues such as the role of the government in welfare policy, unlike in wWestern like in western countries.—\_Ideology in the Korean case mainly reflects the attitudes towards the North Korea (Kang 2003b). During Kim's (DJ) administration, this issue became extensively politicized.—\_The pros and cons of the "sunshine policy" created conflict and it became the major subject of ideological discourse. Thus, Lideology emerged as an has been an important factor in the 1997 presidential election, \_\_variable, but its significance increased in the 2002 election.

<u>The Ee</u>lection outcomes in <u>of</u> 2002, influenced by <u>the variables of</u> age (Kang 2003a) and ideology <u>variables</u>, were not new<sub> $\tau$ </sub> but <u>rather it was a continuoused</u> phenomenon-

But, although their influence had became more powerful and clearer.—<u>Still t</u>Then, why did many people feel a great difference in the 2002 election over previous elections?—<u>We</u> This is an important question to ask, since it is undeniable <u>cannot deny</u> that there were some exceptional events <u>aspects</u> in this election.—\_

I think that <u>the</u> "S-curve" <u>aptly</u> describes the nature of political change<sub>z</sub> very aptly as <u>shown in <Figure 2>.</u>\_\_I think politicalPolitical change is <u>does</u> not manifest until certain macro\_political conditions reach the <u>a</u> critical point.—\_Even Still, although macropolitical conditions reach <u>a critical point</u> without a catalytic alternative <u>that can</u> galvanize new issues and mobilize potential supporters, (what is a "catalytic alternative?" <u>although you may explain it somewhere else later, you need to introduce the concept just</u> <u>a bit so that we can keep up with your argument.</u>), it they could cannot not make result <u>inyield</u> any manifest political change (Newman 1991; 1992; 1994; Cho 2000<u>a? or b?</u>).—\_I argue that considerable social changes had already occurred in <u>the the-previous elections</u>, but <u>due to this lack of a catalytic alternative</u>, political changes <del>were did</del> not manifest-<del>due</del> to the lack of a catalytic alternative.—\_

Finally, the feature of the 2002 election that differed most from the previous ones is the fact that Chung Mong-joon and Roh Moo-hyun agreed upon a unified candidacy following the result of the national poll. The appearance of a third candidate can be interpreted as an indication of party de-alignment. Candidacy unification artificially put a stop to increased party de-alignment and promoted realignment.

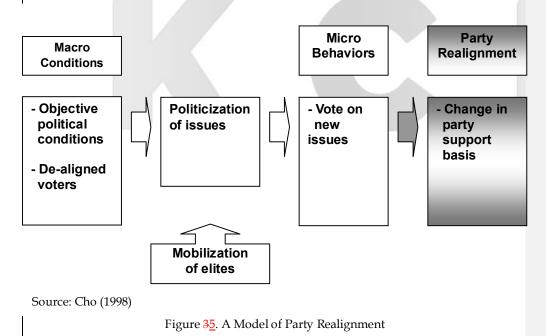

The new trend in the 2002 election may have been that of voluntary civil participation during the campaign. Especially in the case of then-candidate Roh's fan club cum political advocacy group, RohsamoNosamo, exhibited quite earnest Internet-based activities. The Internet made a great difference in this election. It overwhelmed the influence of newspapers and appeared as a powerful emerging medium. Part of the reason the generation gap became a so-salient-a factor in this election has to do with the fact that most Internet users are of the young generation.

I have presented continuity and discontinuity as characteristics of the of-2002

<u>elections.</u> In the next section, I explain why the 2002 election outcomes <u>are were quite</u> unexpected <u>in spitedespite their having taken place within a pattern of continuity. This</u> will also explain why support for the candidates has been so unstable throughout the <u>election year of the continued patterns</u>.

# A Model of Partisan Realignment

To explain the characteristics of change in the 2002 election, it is necessary to present a partisan realignment model that I developed to explain regional alignment shown in <Figure 53>. Partisan realignment means can be defined as the change of current party support basis. Party systems develop through patterns of alignment, realignment, and dealignment and realignment (Key 1955; 1959).

According to this model, three conditions have to be satisfied to bring about party

realignment: those having to do with (?)\_macro conditions, political-(?) issues (specific campaign??) (이부분 좀더 구체적으로 설명해주세요-뒤에 있어요, 앞에서도 설명했고), and a candidate as who acts as a mediator of between these two conditions.—\_Although macro conditions are may be sufficiently achieved present in the necessary form, it does not linkgreatlyrarely affectaffects to the voting behavior unless there is a candidate who can mobilize voters. Therefore, the such a stagnated state of politics would suddenly draw (define?) be defined as an "S-curve" as soon as a politician who can use it politically appears.—\_

Macro conditions indicate two things: the existence of <u>de-aligned</u> voters <u>de-aligned</u> from the current party system, <u>and as well as</u> objective political conditions that may give rise to new issues.—\_Only when macro political conditions are met can new issues capture voters.—\_The first movers in party realignment are young voters because they do not have any commitment to the old political issues.—\_New issues become political if they <u>are-capitalized upon objective political conditions.</u>—\_But for new issues to bring about realignment, they should be <u>"easy\_issues"1-(easy\_how?\_\_\_I\_don't-quite understand here??</u> 무순뜻인가요?미주를 닫았습니다.) (Carmines and Stimson 1989)<sup>±</sup> and crosscutting of the previous issues.—\_Those conditions <del>will-will create a</del> reshuffling of the support basis of existing parties.

But even with these macro conditions, without having a new candidate who can make it political and mobilize voters, micro\_-changes in voter's behavior does not appear. If all of those\_these\_conditions become are satisfied\_met\_and some groups of voters move across the existing party support basislines, then party realignment happensoccurs.

It is <u>Roh's-the</u> appearance <u>of Roh</u> that <u>makes defined such</u> a clear change in the 2002 election.—\_Although age <u>is-was</u> already an important variable, ideology <u>starts</u> <u>started</u> to <u>play anhave</u> influential <u>powerrole</u>.\_\_<u>Mr</u>. Roh contrasted his progressivism against the conservatism of candidate Lee and presented many alternatives in policy. Roh succeeded in mobilizing young voters by using <u>the</u>-ideological cleavage politically.

Considerable social changes had already occurred, but party realignment did not

<sup>&</sup>lt;sup>1</sup> Carmines and Stimson define "easy issues" as those that (1) deal with ends rather than means (2)

happen in the past because of the lack of an alternative candidate <u>who</u> could mobilize dealigned voters <u>away</u> from the existing party system. Then, how<u>Thus</u>,So this begs the <u>question of exactly how exactly did</u>.Roh mobilized young voters.?—\_First of all, he\_Roh has fought against regionalism for a long time.—\_<u>Running Having run</u> three times as a candidate of the party <del>whose with its</del> support base in is-Honam, he <u>successfully</u> created the image of <u>an</u> anti-regionalist.—\_<u>As far as the regionalism is the <u>an (?)</u>To the extent that regionalism is an existing division, it is quite natural that Roh took the lead role in party realignment.</u>

Secondly, he is <u>an</u> outsider not only of the party but also of the <u>mainstream</u> political circles.—\_Roh was not in a mainstream group even within the <u>his own (?)</u>-party (<u>NMP</u>) and had no political power <u>basisbase</u>.—\_Voters <u>got boredbecame apathetic and</u> <u>uninterested in with</u> the existing party system and hoped for <u>a</u> great change in politics. Their support of Roh <u>showed embodied their</u> dissatisfaction with the existing parties. Public discontent toward the existing political parties <u>had already precipitated since</u> (<u>before or right after?</u>)washad already precipitated by the <u>term oftime \_the</u> 1997 financial crisis<u>reared its head</u>.—\_Roh represented "new politics versus old politics<sub>*L*</sub>"<sub>7</sub> promising extensive political reform (Lee H.Yi Hyeon-u 2003).—\_Another ideological issue across regions was the "Sunshine sunshine Policypolicy.".—\_Roh declared that he would continue President Kim's engagement policy so he could use it in <u>the</u> mobilization of new voters who had not <u>undergonegone</u> through<u>experienced</u> the Korean War.

Thirdly, <u>he\_Roh</u> was a progressive politician rarely found in Korean politics. According to a poll conducted by <u>the Joong-ang lilbo</u> in February 2002, voters had become more progressive than the National Assemblymen on issues like welfare, reform of the <u>eChaeboljaebeol</u> (big conglomerates in Korea), <u>and as well as Korea's relationship with the</u> <u>United StatesUS</u>.—\_The conservative National Assemblymen did not read the progressive public's mind.—\_In comparison, Roh's progressive position drew support from the <u>young</u> <u>voterspublic</u> and even after the election many voters moved to <u>the a more</u> progressive position.

서식 있음

서식 있음

are emotional, and (3) stay long on the agenda, unlike "hard issues."

For example, before the election, voters, in their 20s were more conservative than those in their 30s.—\_But as shown in Table 3, which describes post-election polls, <u>voters in</u> <u>their 20s twenty-something voters 20s</u> moved into the more progressive position.—\_It became clear that in Korea, the major ideological issue turned out to be the <u>public's</u> attitude to the North.—\_Thus, in the 2002 election, <u>the macro-political conditions were</u> voters' discontent toward the existing political party system and controversy <u>on-over</u> the sunshine policy.\_\_<u>Mr</u>. Roh took advantage by mobilizing young voters on two issues: political reform and engagement policy towards North Korea.<sup>2</sup>

Table 3. Political Ideology by Different Generations

(1) Before Election

(-50: most liberal / +50: most conservative)

Generation	20s	30s	40s	Over 50s
Average	14.7	13.1	16.9	18.7
		1.1		

(2) After Election

(1=most liberal / 5=most conservative)

	Ideology	Support for North Korea
20s	2.62	2.30
30s	2.55	2 <u>7.</u> 48
40s	2.93	2.52
50s	3.09	2.61
Over 60s	3.17	

Source: Kang (2003a).

<sup>&</sup>lt;sup>2</sup> It is true that attitudes toward the sunshine policy are a function of regionalism<sub>2</sub> particularly among older voters (Lee GYi Gap-yun 2002), but it is not necessarily true for younger voters.

In the end, the seemingly great change in this election resulted from the cumulative effect of social change.—<u>The-\_\_Roh's</u> unique character of Roh-contributed to this phenomenon. He was the person who could challenge existing political power, regionalism<sub> $\lambda$ </sub> and conservative ideology<sub> $\lambda$ </sub> so <u>real</u> change <u>was became</u> possible.—\_The fact that his hometown crosscuts <u>the</u> existing regional party line<u>s</u> also made it easy for him to <u>gear-into</u> realignment<u>effect political realignment.</u><sup>2</sup>

Change did not happen in one <u>a</u> day.—<u>It was going on The factors allowing for it</u> <u>to happen-were already in motion (?)</u>-under the surface.—\_Before <u>the a</u> new candidate brought <u>in</u> new issues and mobilized voters, <u>it (what was?)they were was</u> hidden below. In fact, the sign of change can be found in <u>the case that the 33333333</u> case in which 12 leftwing politicians from the People's Party entered the Democratic Party and were all elected in 1992.—\_The <u>government partyruling party</u>, led by the former President Kim Young<u>-s</u> Sam, promised reform and captured the majority of seats in the <u>Capital capital</u> area for the first time in 1996.—\_In 2000, <u>the blackballing strategies of many</u>\_civic organizations<sup>1</sup> <u>blackballing activities</u> were successful in defeating 70% of the targeted candidates. <u>Those Such</u> outcomes are <u>the proofevidence</u> that change had already started.—\_Changes in the 2002 election were the cumulative result of this movement, <u>and it was simply incited</u> <u>by Rohwhich came to a head with Roh's election into office</u>.

—\_The time factortiming is was also important.—\_Anti-American demonstrations, which arose at the end of the race, assisted in Roh's winning the election. EAs shown in vidence???table 4, voters in their 20s were influenced by the death of two middle school girls. The pictures of deadtwo girls disseminated through Internet aroused young voters' anger and appeared to have affected their voting decision.- (No further discussion if this fact here? The fact that there is no concrete evidence cited, unlike in your other examples, makes this seem like a weak statement.

# Conclusion

In the previous sections, we examined change and continuity of the 2002 election.—\_This election was quite different from <u>ones in the the past election patterns</u>, but it also had many <u>continued elementselements of continuity</u>. Political change came with various conditions.—\_\_\_As a macro condition for party reform, voters' <u>disillusionment</u> <u>withdissolution from</u> the existing issues had started already mostly with young voters.—\_\_

The latent factor of change <u>broke through toappeared on</u>\_the surface because Roh was a new type of candidate who could mobilize voters with new political slogans and <u>focus on the "political reformsunshine policy"</u> and "sunshine policy" as an issue. During the process, TV debates and the Internet <u>also</u> played <u>the a</u> critical role in inducing young voters.

If the last election was the <u>election\_one</u> that brought party realignment, however, there are still several questions <u>that remain unanswered</u>. The most important questions are

those of why the voting rate was so low and why regionalism did not disappear.— First of all, changes during the past elections appeared so <u>concomitantly steadily</u> with the changes in population replacement growth and movement (?) 인구이동을 지칭한 것인지요?? 아니면 demographic change 를 의미하신 것인지??replacement that this election could not be a critical one resulting in aelection that fundamental and abrupt ly changes in the political landscape.major one (무슨 뜻인지요?? You are referring to this as not a major ELECTION, or that major CHANGES were not possible? It sounds like you mean the former, although I think you really mean the latter). That is, the change characterizes secular realignment that brings about gradual change. (you mean social factors, like population growth and change, right?) rather than critical realignment that results in abrupt change. (explain these two terms more a bit - they are not so clear) The sSilent revolution is on going and is not completed vetongoing and still incomplete. Secondly, existing parties are regional parties, so that the voters found it difficult to overcome the regional cleavages.—<u>If If</u> there were had been a new party that had with no regional basisaffiliations, then the result could have been different. - Thirdly, Roh was not attractive enough as a candidate to bring about whole-scale party realignment. Roh suffered from criticism that he lacked the proper manners and qualifications for a presidential candidate.—\_Especially\_with JChung Mong-juoon's (MJ)\_-the\_eleventh-hour withdrawal of Jung Mong-jun's (MJ) support to for Roh, the a night before the election, caused the followersRoh lost the support of MJ's followerssupporters .to also withdraw their support (see Kim ¥.Yeong-tae 2003).-As a result, Roh won the race by quite a narrow margin.—\_If there were had been a better alternative, then grand party realignment could have been possible.

The 2002 election showed that voters are prepared for party realignment.—\_These macro conditions will affect the present party system in some way.—\_Within the MDP, there is debate <u>on-about the</u> establish<u>ment of ing-a</u> new party that will <u>be able to</u> overcome <u>the</u>-regional <u>cleavagedivisions</u>.—\_The new party will eventually enable party realignment before the National Assembly elections <u>comes and give-offer thea</u> chance for people to vote <u>by according to</u> ideology and policy in the next general elections. <u>That is, it\_III</u> is

possible that party realignment, which was incomplete in the 2002 election, will be more complete in the next National Assembly elections.

I think your prose is a bit repetitive. What I mean is that your introduction sounds like you took topic sentences from your discussion and put them together in the introduction, which makes for a little bit of repetition, even though I know you are simply making a statement and are going to present the evidence later. The words are almost exactly the same, making the reader think you're saying essentially the same thing. I think if you could make the introduction more like a preview of what you're going to talk about, rather than a summary, it would be a little more interesting to read, and not sound like you're saying: "Here's what I'm going to talk about. Here's my main argument. Here's what I just told you." I think the conclusion is less like that, since you offer your concrete prediction about the next presidential election, as well as the 2002 National Assembly election. But still, there is a lot of overlap of words and phrasing in the beginning, middle, and end of your paper. Perhaps if you changed the sentence to reflect a bit more like: "Here's what I'm going to talk about and here are the main questions I need to ask and why. Here's my evidence and main argument. Here's my conclusion, based on the evidence I just presented, and this is how I answered my questions." More of that emphasis would help a lot. I enjoyed reading about this topic!
